Preparing a Profession Apr 27 2021 This report presents national standards and guidelines for initial teacher education in Australia. The report is the outcome of wide-ranging discussions conducted across Australia in 1996 as part of a collaborative project to develop standards and guidelines for initial teacher education. In 1997, the Advisory Committee completed a draft exposure of the report and released it to major stakeholder groups nationwide for feedback. The report presents a comprehensive array of qualities expected of new teachers. There are also program and organizational standards and guidelines. Part 1 of the report presents the National Standards and Guidelines for Initial Teacher Education in three sections. The first section outlines attributes of graduates considered necessary for effective beginning teaching and a successful teaching career. The two following sections indicate the normal expectations of institutions and their programs if they are to ensure the specified graduate standards. Part 2 of the report describes development and implementation of the National Standards and Guidelines. Part 3 of the report offers three appendixes with (1) organizations and individuals making written submissions, (2) organizations and individuals consulted, and (3) organizations that responded to the exposure draft of the standards and guidelines. Clinical Practice Guidelines We Can Trust Jul 23 2023 Advances in medical, biomedical and health services research have reduced the level of uncertainty in clinical practice. Clinical practice guidelines (CPGs) complement this progress by establishing standards of care backed by strong scientific evidence. CPGs are statements that include recommendations intended to optimize patient care. These statements are informed by a systematic review of evidence and an assessment of the benefits and costs of alternative care options. Clinical Practice Guidelines We Can Trust examines the current state of clinical practice guidelines and how they can be improved to enhance healthcare quality and patient outcomes. Clinical practice guidelines now are ubiquitous in our healthcare system. The Guidelines International Network (GIN) database currently lists more than 3,700 guidelines from 39 countries. Developing guidelines presents a number of challenges including lack of transparent methodological practices, difficulty reconciling conflicting guidelines, and conflicts of interest. Clinical Practice Guidelines We Can Trust explores questions surrounding the quality of CPG development processes and the establishment of standards. It proposes eight standards for developing trustworthy clinical practice guidelines emphasizing transparency; management of conflict of interest ; systematic review-guideline development intersection; establishing evidence foundations for and rating strength of guideline recommendations; articulation of recommendations; external review; and updating. Clinical Practice Guidelines We Can Trust shows how clinical practice guidelines can enhance clinician and patient decision-making by translating complex scientific research findings into recommendations for clinical practice that are relevant to the individual patient encounter, instead of implementing a one size fits all approach to patient care. This book contains information directly related to the work of the Agency for Healthcare Research and Quality (AHRQ), as well as various Congressional staff and policymakers. It is a vital resource for medical specialty societies, disease advocacy groups, health professionals, private and international organizations that develop or use clinical practice guidelines, consumers, clinicians, and payers.
